EDUCATION

The University of Texas at Austin
Major: Computer Science & Economics B.S
Minor: Statistics and Data Science
Relevant Coursework: Data Structures, Algorithms, Statistics, Risk Management, Elements of Computers and Programming, Elements of Data Science

May 2027

WORK EXPERIENCE

Bridge Health – Software Engineer Intern; Remote
• Created user classes in Spring Boot to achieve core sign-up and log-in functionality
• Configured Spring Boot to sync data in real-time with AWS RDS Postgres and DBeaver, which increased retrieval speed by 63%
• Tested compatibility with Postman and built crucial front-end components such as the Navigation Bar

Texas Convergent– Software Engineer Intern; Austin, Texas
• Collaborated with cross-functional teams to design and develop full-stack applications using technologies such as React, Firebase, and Flask.
• Contributed to feature development, bug fixes, and deployment of scalable web/mobile apps as part of a student-led tech incubator.
• Mentored students through workshops by creating and teaching introductory computer science content in Python and Java.

Cirrus Nexus – AI/ML Intern; Remote
• Designed an interactive digital map visualizing over 250 global data centers and their carbon emissions, integrating real-time data to track environmental impact.
• Leveraged data analysis techniques to identify high greenhouse gas emission patterns across 22 companies, supporting recommendations for optimizing operations toward sustainable practices.
• Developed RESTful APIs to power a dynamic currency exchange rate dashboard, improving financial analytics and enabling real-time cost calculations for international clients.
• Applied basic machine learning models to forecast carbon usage trends and inform decision-making for sustainability initiatives.

PROJECTS

BevoPlace- AI-Powered Marketplace
• Integrated an AI-based recommendation system to personalize product suggestions using user behavior and preference data.
• Added a Natural Language Processing (NLP) feature to improve filtering accuracy and user experience using custom-trained ML models on Firebase functions.
• Implemented chatbot-assisted listings that help users auto-generate item descriptions using on-device Core ML + Firebase-hosted Large Language Models (LLMs) prompts.
• Built using Swift, Firebase (Firestore/Auth), and Core ML; leveraged Firebase Cloud Functions for AI model serving and user analytics.

ShivShares- AI Education Program
• Taught over 30 students from local middle schools, using interactive projects to explain AI concepts such as image recognition, pattern detection, and decision-making.
• Guided students through hands-on activities using tools like Teachable Machine and Scratch with AI extensions, building mini-projects such as emotion classifiers and voice-based games.
• Introduced Python fundamentals and connected them to real-world AI use cases (e.g., chatbots, recommendation systems).
• Designed lessons to make AI approachable and ethical, encouraging critical thinking about how AI is used in society.

ALSpeak- App For ALS
• Developed a mobile application that helps ALS patients communicate more easily using pre-determined phrases in set dictionaries
• Features include customizable dictionaries based on environments/situations such as “Formal”, “Casual”, “Dinner Settings”, “Football Game”, and more
• Won the “Best Business Overall” Award during Convergent Demo Day by a panel consisting of professors, startup founders, and alumni
• Built using Swift, Firebase, and JavaScript

TECHNICAL SKILLS AND CERTIFICATIONS

Languages: Python, Java, TypeScript, JavaScript, SQL

AI/ML Frameworks & Libraries: TensorFlow, PyTorch, Pandas, NumPy, OpenCV, Onyx, TensorRT

Web & App Development: React, Node.js, Spring Boot, Flask, Jupyter Notebooks

Tools & Platforms: AWS, Firebase, Postman, Git, Oracle SQL Developer, Oracle Database, Linux, Docker

Other Skills: Git, Figma, Tableau, Power BI, Excel, PowerPoint, Google Workspaces, JIRA, Agile
