

SHIV PALLA

shivpalla@utexas.edu | (346) 233-8378 | www.linkedin.com/in/shivpalla/ |

EDUCATION

The University of Texas at Austin

May 2028

Major: Computer Science & Data Science B.S

Minor: Informatics - UX

Relevant Coursework: Data Structures, Algorithms, Statistics, Elements of Data Science, Data Visualization, Mobile Computing, Risk Management, Economic Statistics, Macroeconomics

TECHNICAL SKILLS AND CERTIFICATIONS

Languages: Python, Java, JavaScript/TypeScript

Product Skills: Roadmapping, Prioritization Frameworks (RICE, MoSCoW), Technical Requirements Definition, Sprint Planning, PRD/Spec Writing, Competitive Analysis, A/B Testing

User Research & Analytics: User Research, Stakeholder Management, Data Analysis, KPI/OKR Tracking, Amplitude, Mixpanel

Technical Fluency: REST APIs, Microservices, Distributed Systems, Cloud Platforms, Agile/Scrum, CAP Theorem, Load Balancing

WORK EXPERIENCE

IBM – Product Management Intern; Austin, Texas

May 2026 - August 2026

- Owned end-to-end requirements for "AI Daily Brief," a chat-first AI system replacing IBM Maximo's static dashboard, partnering directly with engineering on architecture and API design for an MVP touching millions of industrial maintenance decisions
- Drove a proactive, iteration-first approach to scope, establishing a strict 3-item attention cap that cut on-screen decision load versus the legacy 15+ widget dashboard under a tight delivery timeline
- Authored a technical/product spec (30+ conversational intents, component architecture, 16-step verification script) that engineering built directly against, keeping design and engineering aligned through a fast-moving MVP cycle

Tata Communications – AI Venture Agent Developer; Remote

January 2026 - May 2026

- Partnered with engineering to build and ship an AI-driven deal-sourcing agent, translating business criteria into evaluation logic against a data pipeline covering 1,000+ firms and increasing pipeline coverage ~3x
- Designed and iterated on a strategic-fit evaluation framework across telecom, cloud, and digital infrastructure sectors, improving recommendation accuracy ~35% and cutting evaluation time from hours to minutes
- Presented findings to cross-functional venture and corporate strategy stakeholders, directly informing go/no-go calls on infrastructure and cloud partnership targets

Thrive Education – Product Intern; Remote

January 2025 - May 2025

- Owned the product roadmap for an AI-powered platform serving 1,000+ users, working closely with engineering and clinical stakeholders to prioritize features against a recurring revenue model
- Led design of provider-facing dashboards supporting a new recurring billing stream, working directly with engineers on data flows between provider and patient-facing systems
- Analyzed adoption and engagement data to iterate on features quickly, increasing retention by ~20% while maintaining strict data compliance standards

PROJECTS

AI-Driven Heatwave Alert & Resilience Optimization – Research Project

May 2025 - December 2025

- Defined requirements for a real-time decision-support system optimizing alert routing and response latency, translating stochastic modeling outputs and distributed data pipeline results into actionable interventions for 100,000+ at-risk residents in Texas
- Prioritized and evaluated 5+ resilience strategies against feasibility and impact, projecting a 20-30% reduction in response latency versus static, legacy alert infrastructure

ALSpeak – Assistive Communication App for ALS Patients

September 2025 - December 2025

- Conducted user research with ALS caregivers to define functional and reliability requirements for a low-latency, phrase-based assistive communication app
- Scoped and shipped the MVP feature set (contextual dictionaries, real-time text-to-speech) balancing accessibility needs with engineering feasibility, working hands-on with the engineering team
- Led cross-functional collaboration to ship the product; awarded Best Overall Business at Convergent Demo Day, judged by founders, faculty, and VCs

Ethereum Blockchain – Crypto Wallet

June 2025 - August 2025

- Defined requirements for a decentralized wallet app, scoping core user flows (send/receive ETH, transaction history) against distributed-systems trust and security constraints
- Partnered with engineering to prioritize authentication and access-control integration (MetaMask/Web3), reducing onboarding friction to a single click
- Evaluated smart contract deployment risks to inform requirements for error handling, security, and adversarial-condition resilience
